

PRO FAB TECH and its affiliate **PROFESSIONAL CONSTRUCTION OF FLORIDA**

Completed over three million dollars of work within the Convention Center Expansion for several contractors and trades. From embed plates and anchors for the concrete contractor to rooftop scupper boxes for the plumbing contractor to aluminum toll booth and taxi stand structures for the hardscape contractor, the red trucks and uniform shirts of PRO Fab Tech and PCF have been solving construction problems for numerous trades at the Convention Center Expansion from the remote buildings to the connector bridge and from the roof to the basement tunnels.

Beginning in 1986 as a welding and metal fabrication shop in Winter Haven, Florida, PRO Fab Tech followed the construction market and grew into a service organization that performs for most of the major contractors in Florida. With attention to detail and maintaining construction schedules under difficult circumstances, PRO Fab Tech worked for all the major theme parks and attractions in the Tampa and Orlando areas. With shop fabrication, remote site installation, in-house engineering, service trucks, lifts, material handlers and other specialized equipment, PRO Fab Tech has full capabilities for metal fabrication, ornamental or protective rail systems and custom machine shop and welding projects.

In 2000, PRO Fab Tech partnered with Keith Ragon to form Professional Construction of Florida LC. As a licensed general

contractor, PCF offers new types of projects beyond the specialty contracting scope where PRO Fab Tech operates. PCF was created to pursue commercial construction and development with metal buildings and complete design/build solutions for government and commercial clients.

Pro Fab Tech and Professional Construction of Florida are located at 3460 Recker Highway, Winter Haven, FL 33880. They can be reached by Telephone at 863-401-8857, By Fax at 863-401-8859.
